

metalraxstorage

Capital Shelving is a flexible storage system that is robust in the storeroom and refined in the office. The 'triangular' front edge of the side upright not only ensures safety, but also presents a neat appearance, which is enhanced by a superb ivory, epoxy powder coated finish. Wood effect end panels can be fitted to match desks and other office furniture. Shelves and filing accessories are adjustable on a 25mm pitch allowing maximum usage within the bay.

Storage space is an expensive commodity that you cannot afford to waste. You need a cost-effective storage system to meet your current demands and future expectations. Capital shelving presents a wide range of standard components that can be combined to create a tailor made solution to address the specific requirements of the individual. You can determine how much capacity should be given to box storage or filing.

Here are just some of the available options:

- Shelves for boxed item storage
- Duplex shelves for conventional storage and suspended filing
- Lateral filing cradles for cost effective file storage
- Pull out shelves for a space saving writing surface
- Telescopic filing cradles for low level accessibility
- Tambour doors for security and improved general appearance.

Accessories can easily be retrofitted and bays can be extended to increase capacity as your business develops.

Capital shelving is specifically design to be used in the commercial environment. Choose a static option for maximum access or mobile for maximum capacity. The two main criteria for considering a mobile shelving solution are maximising the available floor area or compacting the storage system into a restricted space. Compared to static shelving, Capital mobile shelving can increase capacity by up to 100% or alternatively save up to 45% of the floor space occupied by the equivalent quantity of static shelving bays.

Decorative panels can be fitted to the ends of shelving bays to match other items of office furniture.
